SUMMARY

Senior Software Engineer with 7 years of experience building scalable distributed systems and backend services, specializing in microservices, event-driven architecture, and high-performance APIs.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Python

Backend & Frontend: Node.js, NestJS, MongoDB, PostgreSQL, Redis, REST APIs, FastAPI, RabbitMQ, microservices, React, Next.js, HTML, CSS

AI & LLM: Claude Code, MCP, RAG, pgvector

Infrastructure & DevOps: Docker, AWS, Pulumi, CircleCI, GitHub Actions

PROFESSIONAL EXPERIENCE

Ninox Software GmbH, Berlin, Germany: Backend Engineer

Sep'22–Aug'25

- **Raised sales org operational efficiency by 60%** by designing and shipping a sales automation microservice in Node.js that eliminated all manual intervention from a workflow previously requiring 3 FTEs of daily effort.
- **Reduced failed request alerts by 20%** by replacing round robin routing with a capacity aware CPU/memory based routing layer handling 1K requests/sec.
- **Enabled zero-downtime client upgrades** by building a version-management system that let clients upgrade software independently.

Nium, Bengaluru, India: Software Engineer

May'21–Aug'22

- **Decomposed a monolithic payments platform into independently deployable microservices** serving 40+ countries, improving fault isolation per domain and cutting release cycles from 3 weeks to 4 days.
- **Reduced inter-service failures by 50%** by designing Node.js REST APIs and a RabbitMQ event-driven layer with shared schema contracts, eliminating recurring integration issues in production.
- **Slashed API latency by 55%** through targeted query optimisation, Redis caching on hot path reads, and index redesign, directly strengthening payment SLAs for 30+ enterprise clients.

Driver Bandhu, Bengaluru, India: Software Engineer

Jul'19–Apr'21

- **Accelerated feature delivery by 40%** by engineering a fleet management platform with clearly scoped Node.js service boundaries and API contracts, enabling parallel squad work from day one.
- **Cut average incident response time by 35%** while leading a 3 person cross-functional team and coordinating with 4 co-founders to deliver a successful platform launch on schedule.
- **Reduced infrastructure costs by 30%** by architecting a serverless backend (AWS Lambda & SQS) that auto scaled to 10x baseline load during the beta launch, validating the platform's scalability before the company sunset.

Ongraph Technologies, Noida, India: Software Engineer

Jun'18–Jun'19

- **Improved survey platform API response times by 35%** by profiling and rewriting high traffic endpoints in Node.js, reducing average query execution from 420 ms to 270 ms.
- **Halved mean time to resolution on production incidents** by introducing structured logging standards and a runbook library, cutting average debug time from 2.5 hours to under 1 hour.

PROJECTS

DesignCoach — AI-powered system-design interview evaluator & coach | TypeScript, NestJS, React, Claude API, PostgreSQL | <https://github.com/Parinita789/DesignCoach>

Apr'26–Present

- Built a hallucination-resistant LLM evaluator using forced tool-call schemas, evidence grounding, and deterministic code-based scoring; regression-tested across seniority and evaluation rubrics.

CareerLens — LLM-powered job intelligence agent | TypeScript, NestJS, React, Claude API, Playwright, MongoDB, Ollama | <https://github.com/Parinita789/CareerLens>

Mar'26–Present

- Built a local job-search pipeline ingesting 200+ listings/day from LinkedIn, Greenhouse, Lever, Indeed.
- Optimized LLM costs by routing high-volume scoring to local Ollama and quality-sensitive tasks to Claude.
